

Patient Portal

Product Overview

Get the most out of your patient portal! Many healthcare organizations are overlooking more sophisticated, 'next generation portals' that facilitate more advanced benefits, such as telemedicine, video consultation for chronic follow-up, population health management. The Shams Group's (TSG) Promoting Interoperability (PI) certified next generation patient portal: complements your EHR and presents many workflow efficiencies for your providers; offers empowering tools for patient engagement; and facilitates meaningful clinical tasks and relevant information exchange for healthcare organizations.

Product Features

- Combines hospital, surgery center, clinic and other facility data into one portal
- Provides smartphones/tablet apps for portal access, notification, reminders and communication
- Routes patient-initiated communication and requests via the portal automatically to the appropriate hospital, practice and provider
- Provides monitoring and follow-up with chronic care patients in a cost effective manner (telemedicine option)
- Significantly reduces patient-physician and patient-ancillary service costs by automating all functions related to communication.

Product Benefits

- Secure messaging ability to communicate with caregivers
- Educational and condition-specific knowledge base and content
- Option to view Personal Electronic Chart Management in a safe and secure manner
- Secure way to verify existing patients using your hospital's Master Patient Index data; expands patient profiles for personalized service
- Procedure-based guidance for before and aftercare
